

12 Things Your AR Process Should Be Doing Automatically

Used by Controllers across **North America** to find hidden cash flow leaks. Check off what your AR process already does automatically — and spot the gaps costing you cash.

■ **Check each item**
your AR does automatically

■ **Count your score**
out of 12 at the end

■ **Gaps = cash flow leaks**
waiting to be recovered

01 Automated Statement Generation

Statements are generated and sent automatically on a set schedule — no manual exports, no spreadsheet prep, no chasing down invoice copies. Each statement includes the original invoices attached.

02 Aging-Bucket Collections Sequencing

Follow-up messages are triggered automatically based on how overdue each invoice is — 30, 60, 90+ days — with escalating urgency and tone without any manual intervention.

03 Real-Time Cash Flow Forecasting

Your expected collections are calculated daily from live AR data, giving finance a clear view of incoming cash by week and month — not a guess based on last month's pattern.

04 Automatic Invoice Attachment

Every collections email includes the original invoice PDF, eliminating the most common delay tactic: 'We never received the invoice.' No manual re-sending required.

05 Escalation to Account Management

When a customer hits a defined overdue threshold, the system automatically flags or notifies account management — so sales knows before relationships are strained.

06 Exception-Based Workflow for AR Staff

Your AR team works from an exception queue — accounts that need human judgment — instead of manually reviewing every open invoice. High-value time is spent on high-value problems.

07 Days Sales Outstanding (DSO) Tracking

DSO is calculated and visible in real time, not just at month-end. You can see whether collections are trending better or worse before it shows up in the bank balance.

08 Customer-Level Payment Behaviour Visibility

The system tracks which customers consistently pay late, which pay early, and which have been worsening — so credit decisions and follow-up prioritization are data-driven.

09 Dispute Logging and Tracking

When a customer disputes an invoice, that dispute is captured and tracked inside your ERP — not in someone's inbox or a sticky note. Resolution status is visible to finance and AR.

■ 10 **Automated Credit Hold Triggers**

Customers who exceed their credit limit or cross a defined overdue threshold are automatically flagged for credit hold review — preventing new orders from increasing exposure.

■ 11 **Month-End AR Reconciliation Support**

AR subledger and general ledger balances reconcile automatically, with exceptions surfaced for review. Month-end close doesn't require a manual AR reconciliation marathon.

■ 12 **Audit Trail on All Collections Activity**

Every statement sent, every follow-up triggered, every escalation initiated is logged automatically. Audit reviews, disputes, and performance reporting all have a clean paper trail.

YOUR SCORE

_____ / 12 items automated

10–12: Strong AR foundation

6–9: Gaps costing you DSO days

0–5: Significant cash flow at risk

Score under 10? There's hidden cash flow in your AR.

BC Team's RAP platform automates all 12 of these inside Microsoft Dynamics 365 Business Central — live in 1 day, starting at \$400/month.
