

The Business Central Implementation Readiness Checklist

What to have in place before you sign with any implementation partner.

■ Requirements & Scope

- **Documented pain points:** Have you written down the 5-8 specific manual workarounds costing your team the most time today?
- **Must-haves vs. nice-to-haves:** Is your requirements list sorted, or is everything marked as critical?
- **Data migration scope:** Has your legacy data been assessed for quality, not just volume?

■ Budget & Timeline

- **Full cost budgeted:** Does your budget include implementation services, training, and contingency — not just licensing?
- **Realistic timeline:** Was your go-live date set based on documented scope, or an external deadline?
- **Internal champion identified:** Does one specific person own this project internally, with authority to make decisions quickly?

■ Partner Evaluation

- **Current Microsoft designation verified:** Have you checked the partner's actual Business Applications designation, not just their marketing claims?
- **Client-size fit:** Does the partner's typical client resemble your company's size and complexity?
- **Named project staffing:** Do you know exactly who will run your project day-to-day?
- **Post-go-live support defined:** Do you know specifically what support looks like in the first 30-90 days after go-live?

■ Internal Readiness

- **Department buy-in:** Have finance, sales, and operations all been part of the requirements conversation?
- **Training plan:** Is training planned by role, not as one generic session for everyone?

Missing more than 3? It's worth closing those gaps before you sign anything.
